Decision Tree
Clustering
Association Rules

Python Functions ISRO CS 2017
Discuss it

Question 10 Explanation:
Regression: It is a statistical analysis which is used to establish relation between a response and a predictor variable. It is mainly used in finance related applications. Decision Tree: Decision tree is a computational method which works on descriptive data and records the observations of each object to reach to a result. Clustering: It is a method of grouping more similar objects in a group and the non-similar objects to other groups. Association Rules: It uses if-then reasoning method using the support-confidence technique to give a result. According to the question Decision Tree is the most suitable technique that can be used to get best result of the experiment.

You have completed 10/10 questions.
Your accuracy is 100%.
